

BRIDGE – U: APPLYING RESEARCH FOR A HEALTHY LIBERIA

Innovation Activity Health Entrepreneurship Advancement Leveraging Research (HEALR) Program CREATION COURSE

The HEALR program features three phases: Ideation, Creation, and Implementation. The Ideation phase trained over 25 aspiring entrepreneurs in fundamental business skills and concluded with an opportunity for teams to pitch their business ideas for Creation. Of the 16 pitches, six were selected through a competitive judging process.

Launched in January 2023, Creation is a 6-month course that supports the teams in refining their health business ideas, culminating in completing a business plan. Through lectures, mentorship, and homework assignments, participants define their problems, identify their customers, analyze current solutions, articulate their value propositions, and develop operations, marketing, and financing plans.

Mentorship is at the program's core, and ULCHS is working with experienced health innovators at the Consortia Improving Medicine with Innovation and Technology (CIMIT) and African Health Innovation Centre (AHIC) to offer weekly one-on-one coaching to participants.

FACILITATORS & MENTORS

The **Consortia Improving Medicine with Innovation and Technology (CIMIT)**, based at Massachusetts General Hospital, fosters collaboration among academics and entrepreneurs to accelerate innovation and catalyze the development of innovative health technologies. CIMIT's expertise lies in connecting research to private-sector entrepreneurship for development impact in the health sector.

MENTORS

African Health Innovation Centre, based in Accra, Ghana strengthens Africa's burgeoning health innovation ecosystem and empowers emerging leaders to improve health outcomes through entrepreneurship and innovation.

VENTURES
